PERSONAL PROJECTS

Attendance Managment System (07/2025 - 08/2025)

- Attendance Management System using React.js for the frontend, Express.js for API handling, Node.js as the runtime environment, and MongoDB as the database. For the UI, I am using ShadCN to build a modern and user-friendly interface.
- Key features of the system include,
- Employee check-in and check-out tracking,
- Automatic calculation of total attendance. Late arrival and on-time status monitoring,
- Real-time data management with a secure database,
- Responsive design for seamless use across devices.

Weather app

- Weather Application using React.js, TanStack Query for efficient data fetching and caching, Tailwind CSS for a modern responsive UI, and Recharts.js for data visualization. The app provides real-time weather updates along with future forecasts, presented through interactive charts and graphs
- Key features include,
- Real-time weather updates for any location,
- Future weather predictions with graphical representation,
- Sunrise and sunset time display,
- Interactive charts and data visualization using Recharts.js.
- Responsive design for both desktop and mobile devices,
- Optimized API handling with TanStack Query.

Resume builder application

- Resume Builder application using TypeScript, HTML, CSS, and The tool allows users to create professional resumes by filling out a form and instantly generating a well-structured template.
